

CSS Introduction

Cascading Style Sheets is used to design the website to make it look better.

- CSS gives style to raw HTML
- It stands for Cascading Style Sheets
- CSS is used to give style to our web pages
- CSS is used to make websites responsive
- CSS takes the responsibility of design in your websites

Responsive means that the site will behave accordingly to the different screen sizes.

3 ways to include CSS

1. Inline CSS
2. Internal or Embedded CSS
3. External CSS file

Syntax

Example:

```
div. span {  
    background-color: blue;  
    color: white;  
}
```

Inline CSS

```
<p style="color: green;">It is example of inline styling</p>
```

Internal CSS

```
<head>  
    <style>  
        p{  
            color: red;  
        }  
    </style>  
</head>
```

External CSS

```
<head>
```

```
<link rel= "stylesheet" href= "style.css">  
<head>
```

4 types of Selectors in CSS

- CSS element Selector
- CSS id Selector
- CSS class Selector
- The CSS grouping Selector
